OBJECTIVE

Final-year Information Technology student at FPT University (expected graduation Dec 2026) with hands-on experience building full-stack products through an AI-Native Development workflow. I designed, built, and deployed my graduation project, TMPMS, end-to-end — architecture, coding, testing, and production operations — using Claude and Antigravity throughout the development lifecycle. I bring clear product thinking, a strong independent work ethic, and a focus on speed and rapid MVP delivery. Looking to join a team building end-to-end products with AI-native development workflows.

EDUCATION

2022 - Dec 2026
(expected)

FPT University Da Nang | Major: Information Technology

PROJECT

2026

TMPMS | FULL-STACK DEVELOPER

Purpose: Graduation project for FPT University — an end-to-end system designed, built, and deployed solo, live in production at tmpms.io.vn.

- Built the frontend with **React, Next.js, and Vue.js**.
- Developed backend services and RESTful APIs with **Node.js**.
- Designed and managed databases using **MySQL and MongoDB**.
- Applied an **AI-Native Development workflow** — using Claude and Antigravity to accelerate architecture design, code generation, refactoring, debugging, and testing.
- Deployed and operated the product in a real production environment at tmpms.io.vn.

WORK EXPERIENCE

Jan 2025

FPT Software | Java Developer Intern

- Developed and maintained Java application modules in a real enterprise environment.
- Debugged, tested, and optimized code on large-scale systems.
- Collaborated with the team following a professional Agile/Scrum process.

SKILLS

Languages: JavaScript, TypeScript, Java

Frontend: React, Next.js, Vue.js, HTML/CSS

Backend: Node.js, RESTful API

Database: MySQL, MongoDB

AI Tools & Workflow: Claude, Antigravity, Prompt Engineering

Other: Git/GitHub, Agile/Scrum

LANGUAGES

Vietnamese (native) • English (conversational) • Japanese (basic)
