Final-year Information Technology student at FPT University Đà Nẵng (expected graduation Dec 2026) and full-stack web developer working across React/Next.js and ASP.NET Core. Designed, built, and deployed the graduation project TMPMS solo, end-to-end – requirements analysis, database design, API development, and UI implementation – and independently shipped Tracking Phượt, a web app that reconstructs animated route maps from GPS photo data with automated video export. Clear product thinking, a proactive work ethic, and a focus on shipping working software quickly.

Core Competencies

- **Frontend**: React, Next.js, Vue.js, TypeScript, JavaScript, Tailwind CSS
- **Backend**: Node.js, RESTful APIs, ASP.NET Core 8, EF Core, SignalR, Java
- **Databases**: MySQL, MongoDB, PostgreSQL, SQL Server, Supabase
- **DevOps & Tools**: Docker, Git/GitHub, Vercel, Postman, Agile/Scrum
- **AI-assisted development**: builds and ships end-to-end products working efficiently with AI-assisted tooling (Claude Code)

Professional Experience

FPT Software — **Đà Nẵng, Việt Nam**
Java Developer (Intern) — *Jan 2025 – May 2025*

- Developed and maintained Java application modules in a real enterprise environment.
- Debugged, tested, and optimized code on large-scale systems.
- Collaborated with the team following a professional Agile/Scrum process.

Independent Projects

Graduation project, live at tmpms.io.vn
TMPMS – Creator & Sole Developer — *2026*

- Traditional-medicine (Đông Y) pharmacy platform combining e-commerce, online diagnosis, and appointment booking with deposits.
- Designed a layered ASP.NET Core 8 / EF Core backend on SQL Server with JWT + Identity auth.
- Built real-time pharmacist chat and an AI chatbot via SignalR, backed by Gemini AI.
- Built FEFO inventory, deposit-backed appointment booking, and automated flash sales; integrated PayOS payments with idempotent, signature-verified webhooks.
- Built the React 19 + Vite frontend and deployed via Docker to production.

Independent project, live at trackingtours.vercel.app
Tracking Phượt – Creator & Sole Developer — *2026*

- Reconstructs an animated route map from the GPS data embedded in trip photos (including HEIC), with a riding-marker animation on the map (MapLibre GL) and real routing/distance via OSRM.
- Built the backend and database on Supabase (Postgres + Storage + Google OAuth), including the trip/photo schema and edit-token-based ownership.
- Implemented three separate video-export pipelines – screen recording, frame-by-frame canvas capture, and server-side rendering (Puppeteer + ffmpeg) – for consistent output across devices.
- Integrated automatic video posting to TikTok via the Content Posting API.

Education

- **FPT University** — **Đà Nẵng, Việt Nam**
  Bachelor of Information Technology — *2022 – 2026 (expected)*
  Final-year standing, expected graduation December 2026.

Languages

- Vietnamese (native), English (fluent), Japanese (basic).
